

Keystone Web® “Hands-on” Training Webinar

Course Description:

This 4 1/2 hour, instructor-led “hands-on” webinar will assist the user in navigating through the basics of the Keystone® Web software. The user will learn to manage cores, doors, keys and key-holders by remotely viewing the instructor’s computer as practical exercises are conducted and **remotely controlling lab computers**. The user will also learn how to back up the database, manage users, import door & people information and create reports. The use of optional functionality can also be explored on an as-needed basis.

NOTE: *The students will be remotely controlling computers in the BEST Access Solutions Training Center so it is not necessary to have Keystone Web software installed for this training webinar.*

Each attendee will need a phone with a headset or speakerphone and a computer with web access.

You can test your ability to connect to the webinar software by clicking [here](#) and joining a test session.

Who Should Attend: Anyone who is responsible for managing cores, doors, keys and key-holders with the Keystone Web® software.

Cost: No Charge

Location: Web-based

Start Time 12:00PM (Eastern)

This class is also offered at our Indianapolis Manufacturing Facility as part of a suite of one-day classes (listed below).
